NOTE ABOUT THE COVER

Each dot indicates a work stoppage which occurred during the 11 year period from January 1,1957 through December 31,1967. There are 196 stoppages represented on the map and placed by the county seat of the 24 counties involved.

FOREWORD

The Unemployment Compensation Commission of Montana has compiled a statistical series of work-stoppages or lockouts caused by labor-management disputes in Montana since January 1957 through December 31, 1967. This report was prepared by Michael A. Murphy, Chief of Research and Analysis Section, assisted by the staff of this department of the Unemployment Compensation Commission.

Information as to actual or probable existence of work stoppages is collected from a number of sources. Clippings on work stoppages or lockouts are obtained from a comprehensive coverage of daily and weekly newspapers throughout the State. Information is received from the Federal Mediation and Conciliation Service. Other sources of information include State Boards of mediation and arbitration, research division of our State Central office and local offices of the Montana Employment Service. Some employers associations, companies and unions also furnish this agency with work stoppage information. The Unemployment Compensation Commission of Montana wishes to acknowledge the widespread cooperation of all of the forementioned sources of information.

Although work-stoppages by their very nature are usually matters of public knowledge and of reporting by newspapers and other news media, the Unemployment Compensation Commission holds confidential the individual reports submitted by employers and unions.

The issues in disputes in most work-stoppages are many and varied, and do not always lend themselves readily to immediate and exact classification. Stoppages are generally classified by major issue into the following broad groupings:

a. Wages, hours, and supplementary benefits.
b. Union organization and security.
c. Job security.
d. Plant administration.
e. Inter- or intra- union matters.

Since the Unemployment Compensation Commission is neither a mediation nor arbitration board, it has refrained from classifying issues and the ultimate settlement of disputes into: (a) those ending with a formal settlement; (b) those ending without a formal settlement; and (c) those concluded by the employer's decision to go out of business.

The use of work-stoppage statistics as an indicator of industrial unrest is the reason for this compilation. Whether they serve this elementary purpose is open to question. In any event, some qualifications must be taken into consideration in their use. The willingness of workers to strike as a protest against existing conditions may be encouraged or deterred by outside influences, such as the employment situation, the state of the business cycle, and possible political or public reaction. Within the plant, the strength of the union or of employer opposition may influence both the willingness of the workers to start a strike or to extend its duration.

Whether as a measure of industrial unrest or the state of labor-management relations, strike statistics are necessary for State and municipal government agencies, particularly

those concerned with labor affairs. Unions, employers, and employer associations use strike data to assess their own experiences, and business and civic organizations are concerned with their community promotional possibilities. Schools, particularly those teaching courses in industrial relations, and industrial relations counselors also find strike statistics useful. Finally, the press and news media are interested since strikes and information about them are newsworthy.

Secondary idleness is not measured; that is, the figures do not cover those employees made idle in other establishments or industries as a result of material or service shortages resulting from a work stoppage. At times, the idleness of employees directly involved in a strike may be considerably less than the idleness of other workers brought about indirectly. No satisfactory method, however, has been found to measure or estimate such indirect effects adequately.

The Commission does not attempt to measure the cost of strikes in terms of the amount of production lost. The calculation of cost involves many complex and interrelated factors for which information is not readily available, including such matters as production schedules before and after the stoppage, diversion of output or services to other plants or employers, the flow of raw materials, and the amount of overtime worked before and after the strike. The problem is magnified beyond statistical control if secondary costs are to be accounted for.

CONTENTS

DEFINITIONS 1-2

TABLES:

1. Work Stoppages in Montana, 1957 - 1967 3

2. Size of Work Stoppage by Years 4-9

3. Duration of Work Stoppage by Years 10-15

4. Industry Work Stoppages by Years 16-26

5. Work Stoppages, by Counties and Years 27-32

DEFINITIONS

STRIKE: A strike is defined as a temporary stoppage of work by the group of employees to express a grievance or enforce a demand.

LOCKOUT: A lockout is a temporary withholding of work from a group of employees by an employer (or a group of employers) in order to induce the employees to accept the employers terms. Because of the complexities involved in most labor-management disputes, this Commission makes no effort to determine whether the work stoppages are initiated by the workers or employers. The terms "strike", "lockout" and "work stoppages" are used interchangeably in this report.

WORKERS AND IDLENESS: Figures on "workers involved" and "man-days idle" include all workers made idle for one shift or longer in establishments directly involved in a stoppage. They do not measure secondary idleness - that is, the effects of a stoppage on other establishments or industries whose employees may be made idle as a result of material or service shortages or a business and economic slow-down of trades and services. The total number of workers involved in work stoppages in a given year may count workers more than once if they were involved in more than one stoppage during that year.

In some prolonged work stoppages that extend from one calendar year into the next calendar year, the work stoppage and number of workers involved have been counted more than once and credited to the year and a subsequent year in order to project the impact of work-stoppages and the industrial composition of a particular year. It is also necessary to estimate in part the total man-days of idleness, if the exact number of workers idle each day is not known. Whenever possible, significant changes in the number of workers idle are secured from the parties for computing man-days of idleness.

MAN-DAYS IDLE: Man-days idle are obtained by multiplying the number of workers involved by the number of working days (duration) on which they are idle. Thus, this measure takes into account the magnitude of the stoppages (workers involved) and the duration of the stoppage (number of working days lost).

ESTIMATED IDLENESS TIME: Estimated idleness time is computed by multiplying the number of workers involved during a year by the number of man-days of idleness (duration of stoppage). In computations, Saturdays (when customarily not worked), Sundays, and established holidays as provided in most union contracts are excluded from the total.

LIST OF LEGAL HOLIDAYS

January 1st	New Year's Day
February 12th	Lincoln's Birthday
February 22nd	Washington's Birthday
May 30th	Decoration or Memorial Day
July 4th	Independence Day
September	Labor Day
October 12th	Columbus Day
November	Election Day
November 11th	Veteran's Day
November	Thanksgiving Day
December 25th	Christmas

ESTIMATED TOTAL NUMBER OF WORKING DAYS IN EACH CALENDAR YEAR: The basic law is a 40 hour week or a 5 day week; Saturdays, Sundays and "Legal Holidays" are excluded.

CALENDAR YEAR	NUMBER OF AVAILABLE WORKING DAYS	
1957	254	(8 Holidays)
1958	254	(7 Holidays)
1959	255	(6 Holidays)
1960	252	(8 Holidays)
1961	253	(7 Holidays)
1962	252	(9 Holidays)
1963	253	(8 Holidays)
1964	255	(7 Holidays)
1965	255	(6 Holidays)
1966	254	(6 Holidays)
1967	255	(5 Holidays)

LIMITATIONS OF DATA: Although this Commission seeks to obtain complete coverage - a "census" of all work stoppages - information is undoubtedly missing on some of the smaller work-stoppages. Presumably, additions of these missing work-stoppages would not measurably affect the figures for number of workers and man-days of idleness.

The basic measures in work-stoppages are:

1. Number of stoppages.
2. Number of workers involved.
3. Number of man-days idled (duration).

The Industry Classification used follows the Standard Industrial Classification Manual of the Federal Bureau of the Budget.

1966	6	141	23.5	250	*0.2*	4,472
1967	23	1,025	44.6	9,360	*7.8*	906,071
TOTAL (11 Years)	196	6,923	X X	54,066	*X X*	2,244,207

1/ The number of work stoppages and workers relate to those beginning in the calendar year. If the work stoppage should extend into the succeeding calendar year, it is also counted the second time. Average duration is computed for each year from the beginning of the work stoppage through December 31 of each calendar year. Man-days of idleness include all work stoppages in effect.

2/ Figures are simple averages; each work stoppage is given equal weight regardless of its size.

3/ In these tables, workers are counted more than once if they were involved in more than one work stoppage during the year.
